

■ OPERATIONS INTELLIGENCE PLATFORM

Receiving Operations Intelligence

See every truck. Understand every delay.
Improve every receiving day.

YardVis is not a yard management system — it is the operational record of what actually happens between a truck's arrival and its departure, and why.

01

Complete Visibility

Every truck. Every dock.
Every receiving event.

02

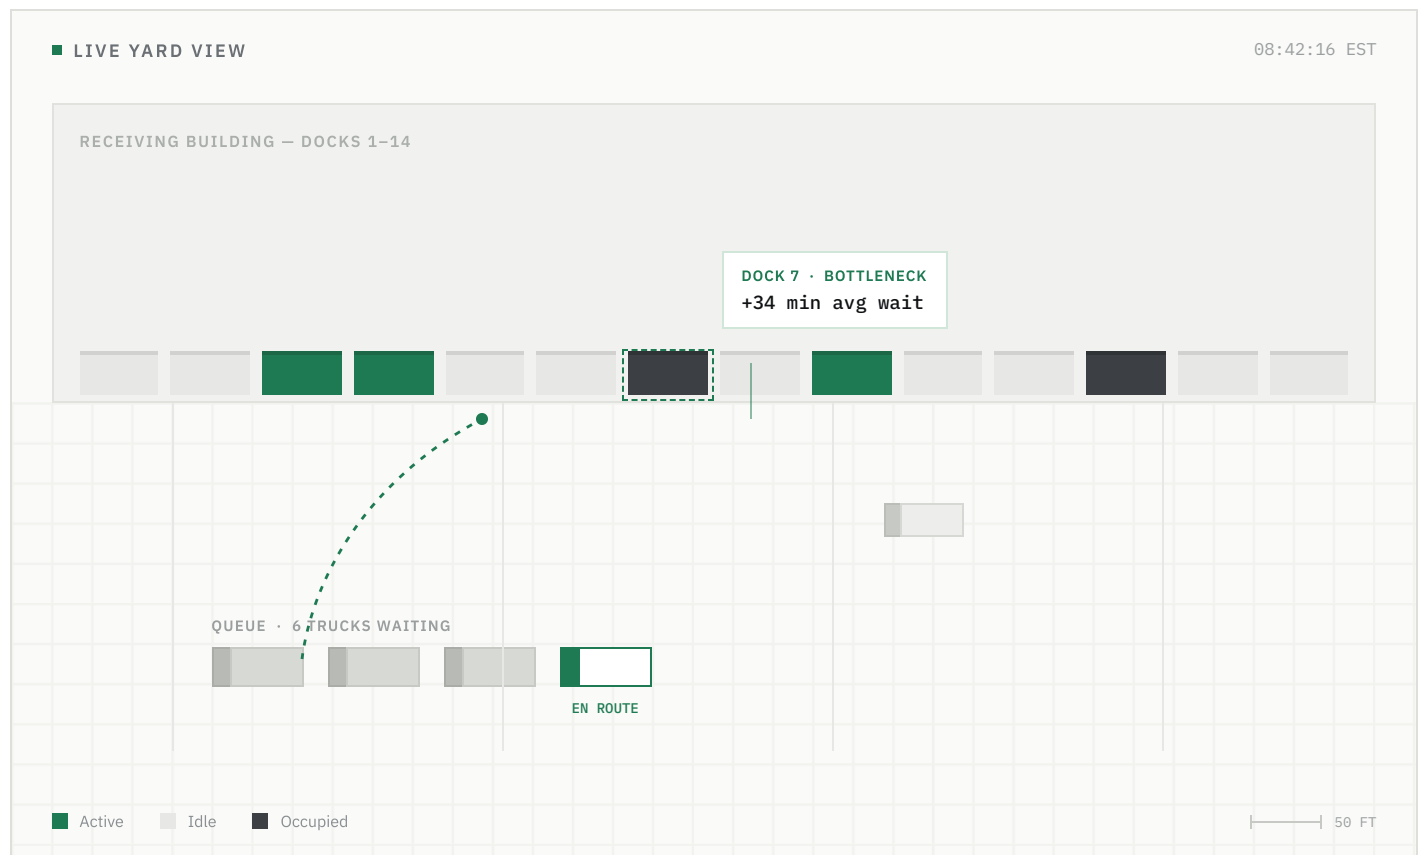

Delay Intelligence

Why delays happen —
not just when.

03

Continuous Improvement

Receiving activity, turned
into operational change.

■ THE PROBLEM

Warehouses know
when trucks arrive.
They know
when trucks leave.
Everything between
is **the blind spot**.

Every delay leaves a signal. Almost no one captures it.

That blind spot creates avoidable delays, detention costs, and communication gaps with carriers — and erases the evidence teams need to improve.

■ INTRODUCING YARDVIS

YardVis captures every stage of receiving in one connected workflow, turning day-to-day activity into operational intelligence — so managers understand recurring delays and make better operating decisions.

WITHOUT YARDVIS

- Arrival and departure times — with a gap in between

WITH YARDVIS

- Every stage of the journey captured, in order

- Delays explained after the fact, if at all
- Dock assignment and paperwork tracked by memory

- Root causes surfaced automatically, by pattern
- One connected, auditable receiving record

PILOT PROCESS

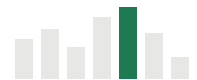

WHAT YOU'LL SEE

A sample operational summary, generated automatically from one week of receiving activity.

WEEK OF JUN 29 – JUL 5

RECEIVING DOCK A

124

 trucks completed this weekAverage wait to dock **41 min**Peak congestion window **10:00 – 11:30 AM**Largest recurring bottleneck **Dock 7**Carrier with highest avg. delay **Werner Ent.**Recommended improvement **Add a second inspector at Dock 7 during peak window**
