

YARDVIS PILOT OVERVIEW

The YardVis Pilot

From first truck to operational intelligence in 30 days.

WHAT TO EXPECT

A 30-day path, start to finish.

Every pilot follows the same sequence. Nothing is improvised.

DAY 1

YardVis is installed at your first dock and configured for your existing workflow.

WEEK 1

Your team receives its first trucks through YardVis, with support on-site.

WEEK 2

Receiving activity is captured automatically, without changing how your team works.

WEEK 3

Patterns in dock activity begin to surface as operational intelligence.

WEEK 4

Your team reviews the first month's findings together with YardVis.

WEEK 1

Install

Setup is a single visit. No integration project, no downtime.

EXPECTED TIME – 2-3 HOURS, ONE SITE VISIT

- 01 **QR signage**
Placed at each dock door for driver check-in.
- 02 **Dock configuration**
Doors, lanes, and shift patterns mapped to your site.
- 03 **Team setup & accounts**
Receiving staff and supervisors added, roles assigned.
- 04 **First receiving workflow**
A truck is received end-to-end, with a YardVis specialist present.

Capture Operations

Your team keeps receiving the way it always has. YardVis captures the activity underneath it.

Truck arrives → Driver check-in → Dock assignment

Unload → Documentation → Completion

Each step above is already part of your receiving process. YardVis quietly records timestamps, dock assignments, and documentation as they happen — no extra steps for your team, no separate system to check.

Operational Intelligence

By the third week, enough receiving activity has been captured for patterns to emerge on their own.

Recurring delays

Where trucks consistently wait longer than they should.

Dock bottlenecks

Which doors and shifts absorb the most load.

Carrier trends

How individual carriers perform over time.

Documentation quality

Where records are complete, and where they aren't.

Root cause signals

Early indicators of why delays and gaps occur.

These signals sharpen with time. The more receiving activity YardVis observes, the clearer the picture becomes — with no additional work from your team.

Executive Review

The pilot closes with a single meeting. Your team sees exactly what was captured, and what it means.

- | | | |
|----|---------------------------|---|
| 01 | Operational summary | What happened at your dock over four weeks. |
| 02 | Weekly intelligence | The patterns identified, in the same format you'll receive going forward. |
| 03 | Improvement opportunities | Specific, low-effort changes worth considering. |
| 04 | Questions | An open discussion — nothing scripted. |
| 05 | Next steps | Your decision on where, and whether, to expand. |

What YardVis measures.

The pilot doesn't promise an outcome. It gives you a clear, ongoing measure of what's actually happening at your dock.

Average wait-to-dock

Time from truck arrival to dock assignment.

Documentation compliance

Share of receipts completed with full records.

Dock utilization

How evenly load is distributed across doors and shifts.

Carrier patterns

Consistency and reliability by carrier over time.

Operational recommendations

Specific changes surfaced by observed activity.

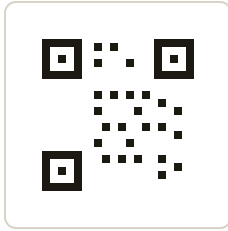

Receiving visibility

A record of what happened at every dock, every day.

READY TO START?

Request a Pilot

A pilot begins with a short conversation about your dock and your goals.
From there, installation can happen within days.
